

DIY Dancing Carols

Materials

- Large bowl/bucket
- Thin plastic film (you can use silicon or reuse the wrapping from fruits and veg)
- 100s and 1000s
- Rubber band OR tape

Instructions

1. Place the plastic film over the top opening of your bowl and secure with a rubber band or tape. Ensure the entire surface is covered and the film is pulled tight.
2. Sprinkle 100s and 1000s onto the surface of the film.
3. Placing your mouth level with the surface of the film and very close (but not touching) start making some noise!
4. You will notice your sprinkles start to dance as they are affected by the vibrations of your voice.
5. Try the same experiment with slime/oobleck instead of sprinkles!
